

# VIKANE® GAS FUMIGANT PROVIDES THE RELIABILITY THAT SPOT TREATMENTS CANNOT

You've just discovered you have drywood termites in your home. While the implications of this infestation are very real, you can rid your property of these destructive eating machines. Vikane® gas fumigant offers proven reliability, eliminating 100 percent of drywood termites, so you can rest assured that all the drywood termites in your home are gone.

Vikane eliminates 100 percent of drywood termites. And only Vikane has protected more than 2 million structures over the past 50 years. Vikane is the only American-made sulfuryl fluoride gas fumigant for whole-house treatments. Whole-structure fumigation with Vikane is a smart choice to help protect your largest investment because it immediately stops termites from further damaging the structure.

## Spot treatments don't even compare

Imagine trying to find a needle in a haystack. For a spot treatment to be successful, it's necessary to literally find and thoroughly treat every drywood termite colony in a structure. That requires the spot treatment to access every nook and cranny in the home. From attic rafters to studs behind drywall, every home contains inaccessible areas.

Market research shows that 81 percent of pest management professionals agree that efficacy is the main weakness of spot treatments.<sup>1</sup>

Don't risk property damage by using spot treatments, which have many downsides:

- If the hidden termite infestation is not found, a spot treatment will not be applied to control them.
- Some spot treatments require drilling, viewed by some homeowners as further damaging the home.
- Homeowners may have to pay for multiple spot treatments to control drywood termites.
- Drywood termites missed by incomplete spot treatments can re-establish the entire colony.

## Make the smart choice

With whole-structure fumigation with Vikane® gas fumigant, there's no place for drywood termites to hide. Vikane disperses throughout the entire home, even into areas infested by drywood termites that are hidden or inaccessible for pest management professionals to inspect and apply spot treatments. Vikane penetrates through the wood to eliminate all termite colonies.

Specialty Gas Fumigant

## Count on fumigation professionals who use Vikane

Vikane is used only by qualified fumigation experts, supported by Dow AgroSciences and its distributor partners. It is backed by unparalleled service and support. Vikane® gas fumigant is made in the U.S. in accordance with the Responsible Care® standards of the American Chemistry Association. So when you select Vikane, you receive proven efficacy from qualified professionals, which provides peace of mind.

Spot Treatment	Vikane® Gas Fumigant
Drywood termite colonies must be found and accessible for treatment; spot treatment may not kill all termites in the treated colony	Eliminates all drywood termite colonies, including colonies that are hidden or inaccessible for spot treatment
May be a lower cost for a single treatment but may require repeated treatments and fumigation if drywood termite colonies are not eliminated	Cost for a single treatment is higher, but one treatment eliminates all drywood termite colonies
Leaves residue	No residue
Research for some treatments is limited	Backed by extensive research
May require drilling, which could further damage structure	No drilling required

### Why choose Vikane gas fumigant?

- 100 percent elimination of drywood termites
- Proven effective on more than 2 million structures
- More than 50 years of trusted fumigation expertise
- Administered by trained, knowledgeable fumigation experts
- Backed by service and support unparalleled in the industry
